New dean appointed for Asper School of Business

Michael Benarroch has been named the new dean of the I.H. Asper School of Business at the University of Manitoba. The appointment is effective from November 15, 2011. Benarroch is currently a professor of economics and founding dean of the Faculty of Business and Economics at the University of Winnipeg, a position he has held since 2008. Prior to this role, he served as acting dean of Business and Economics, and for nine years he served as chair of the department of economics at the University of Winnipeg. He also served on the University of Winnipeg’s senate and Board of Regents, as well as other university bodies; for his service he was awarded the Farquhar Award of Excellence in Contributing to University Governance.

“We are very pleased to have Dr. Michael Benarroch assume leadership of the University of Manitoba’s business school. His proven success as an administrative leader, as well as his highly collaborative approach and his teaching and research achievements, will ensure the school continues its tradition of excellence,” said Dr. David T. Barnard, president and vice-chancellor at the University of Manitoba.

Benarroch’s research focuses on international trade with specific applications to innovation and the environment, and he is an expert in exchange rates and government economic policy. His research has been supported by various sources, including SSHRC (Social Sciences and Humanities Research Council), and has been widely disseminated in top journals in his field, book chapters, reports, invited academic lectures and conference presentations.

“It is my great pleasure to assume the role of dean of the Asper School of Business. I look forward to working with the school’s talented faculty members and dedicated staff, and to engaging with its gifted, energetic students,” Benarroch said. “Together, with the help and support of The Associates and The Young Associates and the community, we will build on the Asper School’s strengths to position it as one of Canada’s, and the world’s, leading business schools.”
In the summer months I usually shift the balance of my reading. Considering my academic demands (and less for professional needs). One result of that change in balance have been many books read in recent weeks—some Canadian authors and some others. One book I’ve particularly enjoyed is The Poets Laureate Anthology, edited by Billy Collins, which celebrates those chosen as poets laureate in the United States. It’s a wonderfully diverse collection of people and poems—some favourites of mine, some familiar, some new to me. The book served as an introduction to several whom I had known by name but had not previously read. As a result I was motivated and opportunity), I recommend both collections.

In anticipation of pleasure I also read Stanley Fish’s How to Write a Sentence: And How to Read One. Fish is a sometimes controversial but always thoughtful and articulate person. He takes perhaps some of the same points from familiar authors, analyzes their intent and construction, then demonstrates how to use these approaches in other contexts. This book was a delightful reading experience and a good learning experience (I should be a more discriminating reader as a result), though I don’t expect much evidence of his rich style to be demonstrated in my prose!

Barnard: ‘Fish is a sometimes controversial but always thoughtful and articulate person’

The release of George R. R. Martin’s fifth book in his Song of Ice and Fire collection, together with the popularity of the HBO series based on the earlier books, created enough activity on websites I use, and mentions in conversations with friends and family, that I decided to read the first volume, A Game of Thrones, to investigate. I don’t read as much fantasy and science fiction as I used to do, but I found the world created here to be interestingly complex, the story well told and the sharing of the experience with friends and family to be enriching.

To round out the categories, I’ve also read some mysteries and some theology for pleasure.

Robert Sutton’s The No Asshole Rule was a gift from a UM colleague just before the summer began. Sutton describes the impact that bad behaviour can have in a workplace, and the value of identifying and eradicating it—both from one’s own behaviour and on the part of others. I took the message to heart.

Employee survey prize winner announced

Last June, many of U of M staff and faculty members took the time to complete the It’s About Us Employee Experience Survey. This fall, the Outstanding Workplace Initiative team will review the results of the survey and share the results with the community in a plan for moving forward. As those who completed the survey will recall, people who submitted their names at the end of the survey were entered to win one of four prizes. The winners were chosen randomly by Probe Research Inc. and have been notified. Winners Paul Nyhof, Sandra Ericsttia and Tyler Craig received U of M bookstore gift cards, while Tom Deakin took home the iPad 2.

We asked Tyler Craig, an office assistant with the Northern Social Work Program, what he likes best about his U of M workplace. “Thompson is a small family-friendly city with a lot of outdoor activities only a short drive away. Even though we are a part of the University of Manitoba, we have been able to keep a distinctly Northern flavour in the Northern Social Work Program. Our program has a personalized and friendly atmosphere for our staff and students which for me makes it enjoyable to come in to work every day. While the Fort Garry campus might be an eight hour drive to the south, for me it’s only a quick phone call away. When I do visit the main campus I am made to feel like a colleague and not an outsider. It is safe to say that my favourite part of working for the U of M is the fact that I am working with so many very dedicated people who are devoted to living and making Northern Manitoba a better place to live by educating the social workers of tomorrow.”

For more information about the Outstanding Workplace Initiative, please contact Rosalyn Howard or Stan Amaladi or go to the OWI website at: umanitoba.ca/outstanding_workplace/
Li Ka Shing Foundation donates $1M gift to Shantou exchange

BY ILANA SIMON
For The Bulletin

On the 10th anniversary of the Shantou University-University of Manitoba academic exchange, the Li Ka Shing Foundation has committed another $1 Million gift to the U of M to build on the Chinese-Canadian partnership and enhance the exchange program.

The generous gift was announced by Ms. Solina Chau, Director of the Li Ka Shing Foundation, at the “Building Bridges in Medical Education and Research” symposium held September 20 in Frederic Gaspard Theatre at Bannatyne Campus.

Chau noted that the hallmark of any friendship is commitment. “With that in mind, I want to thank the Li Ka Shing Foundation, Husky Energy Inc., my counterpart, Shantou President Dr. Xiaohu Xu, Dr. Frieda Law, Dr. Patrick Choy and all participants from Shantou University and the University of Manitoba for their support, passion and dedication to this partnership.”

Over the past decade, more than 100 medical students, residents, researchers and faculty members have participated in the visionary Shantou University-U of M academic exchange program—broadening their perspectives on one another’s cultures, medical treatments, research and education.

Speakers at the symposium included Frieda Law, Shantou exchange coordinator; Dr. Patrick Choy, U of M exchange coordinator; Dr. Clayton Dyck, U of M Deputy coordinator; Shantou Medical student participant Shu-ru Chen; and U of M participant as both student and resident, Teresa Wawarykow.

“On behalf of our Chairman and all of us from Li Ka Shing Foundation and Shantou University, we would like to express our deep appreciation for the support from the University of Manitoba in building this dream, the achievements we made together the last 10 years will be continued and built upon,” Mr. Li has asked me to share with President Barnard this morning that our foundation will top up the $2 million Canadian dollars, “I’d like to give a special thanks to Mr. Li Ka-shing, [Shantou University] is the realization of a dream—a dream that he could attract like-minded individuals and academics devoted to reforming and building a new model of higher institution in China,” said Chau.

On behalf of our Chairman and all of us from Li Ka Shing Foundation and Shantou University, we would like to express our deep appreciation for the support from the University of Manitoba in building this dream, the achievements we made together the last 10 years will be continued and built upon, Mr. Li has asked me to share with President Barnard this morning that our foundation will top up the $2 million Canadian dollars, “I’d like to give a special thanks to Mr. Li Ka-shing, [Shantou University] is the realization of a dream—a dream that he could attract like-minded individuals and academics devoted to reforming and building a new model of higher institution in China,” said Chau.

The Li Ka Shing Foundation contributed $1 million in 2003 to support the exchange program and, in 2007, another $1 million contribution came from Husky Energy Inc. Today’s gift, bringing the total to $3 million, continues to develop the partnership, fostering greater cooperation between both universities.

“We thank the Li Ka Shing Foundation for its support and today’s generous gift, and look forward to continuing our transformative partnership,” said David Barnard, U of M president and vice-chancellor. “I’d like to give a special thanks to Mr. Li Ka-shing. Without his courage, compassion, and innovative vision, none of this would be possible.”

Barnard noted that the hallmark of any friendship is commitment. “With that in mind, I want to thank the Li Ka Shing Foundation, Husky Energy Inc., my counterpart, Shantou President Dr. Xiaohu Xu, Dr. Frieda Law, Dr. Patrick Choy and all participants from Shantou University and the University of Manitoba for their support, passion and dedication to this partnership.”

Over the past decade, more than 100 medical students, residents, researchers and faculty members have participated in the visionary Shantou University-U of M academic exchange program—broadening their perspectives on one another’s cultures, medical treatments, research and education.

Speakers at the symposium included Frieda Law, Shantou exchange coordinator; Dr. Patrick Choy, U of M exchange coordinator; Dr. Clayton Dyck, U of M Deputy coordinator; Shantou Medical student participant Shu-ru Chen; and U of M participant as both student and resident, Teresa Wawarykow.

“We sincerely thank the Li Ka Shing Foundation for its great support over the last 10 years and today’s new $1 million gift,” said Choy. “We also want to acknowledge and express our gratitude to Dr. Frieda Law and Shantou University for their commitment to our successful academic exchange program and look forward to our 20th anniversary celebration.”

Brian Postl, dean of Medicine, said the Shantou University/U of M academic exchange provides powerful learning experiences for everyone involved, that cross language, culture and discipline. Through the exchange, clinician scientists have a chance to work with internationally renowned researchers and faculty can teach and learn new skills in both countries.

“The opportunity to train in another country is valuable for both Canadian and Chinese medical students,” said Postl. “As these students embark on their clinical careers, the lessons learned through this exchange will help them serve their patients as more compassionate physicians.”

A Q & A with Les Howard, ROSE project manager

BY LINDSAY STEWART GLOR
For The Bulletin

Since it was introduced in 2009, the resource optimization and scaling enhancement (ROSE) project has been managed by an outside agency, PricewaterhouseCoopers (PwC). Last spring, PwC began transitioning off of the project, as an internal project manager (PM) firmly took the reins.

Les Howard joined the University of Manitoba in April as both the PM for ROSE, as well as the director of the newly formed Office of Continuous Improvement (OCI). Howard has 25 years of experience in project management and process analysis, and teaches at the University of Winnipeg and Red River College. He recently sat down with The Bulletin to discuss the present, and future, of the ROSE project.

You spent the last five years working in health care; what made you make the move to the U of M? Les Howard: To have the opportunity to create something from scratch was incredibly appealing; and the scale of the project would find me really exciting. As project manager, my role is to ensure that good decisions are being made and that the right steps are being taken, so that quality work can be delivered. While it’s challenging and time consuming, this is my home province, my hometown and my alma mater - I hope to be able to look back and say that I made a positive impact on the community. That's why a lot of people are at the U of M, to help promote the greater cause of education and research.

Is hiring a project manager and management team contrary to the idea of reducing expenditures? LH: No, contrary to the idea of reducing expenditures? LH: No, it is a comprehensive university with eight disciplines, including medical school, and is a privately funded public university, a model unique in China. It is the only university in the eastern part of the Guangdong area (known as Chiuchow to the Chinese), home to more than 15 million people.

“The opportunity to train in another country is valuable for both Canadian and Chinese medical students,” said Postl. “As these students embark on their clinical careers, the lessons learned through this exchange will help them serve their patients as more compassionate physicians.”

PHOTO: MIKE LATSCHISLAW

A Q & A with Les Howard, ROSE project manager

LH: In the end, it should cost less to complete a large-scale project like ROSE with a project manager than without one. Let me put it this way: I could build my own house, but could I do it in the same amount of time as a professional builder? Would it have the same quality? Probably not, and in the end, it would probably end up costing more. Also, without a dedicated project management team, you are putting that work on someone else’s plate, in addition to their regular workload. That person might not have the necessary time, knowledge or skill set to do the job properly.

What imprint has ROSE made so far on campus? LH: When this process was first undertaken, the university was in a position where many of its processes were simply outdated. Could things have continued on? Sure, but as a result the university probably would have lagged behind. As an institution, it needed to adapt, to move forward. I think the biggest thing that ROSE has brought to the U of M is the realization that change was needed.

How are employees being supported through these changes? LH: We have brought in professionals who are skilled in change support and can help all of us move from where we are, to where we want to be. Change support is an important part of the process and it will always need to be incorporated.

Overall, what do you hope the impact of ROSE is on employees? LH: Most people want to be able to make a difference when they go to work, to say that they changed their corner of the world. Hopefully the processes we are putting in place through ROSE will allow people to contribute their skills, instead of being pulled into inefficient work. It is important that we provide people with a work environment that allows them to add value to their jobs.

When will ROSE be done? LH: The projects that are currently under the ROSE umbrella will be complete by 2013. That said, other projects will come up and it will then be a matter of deciding whether or not they will be supported through ROSE, or through the Office of Continuous Improvement (OCI).

What is the OCI? LH: The OCI has been set up to provide resources and supports to all internal units that are seeking outside skills and guidance for project management and continuous improvement. We want the OCI to be responsible for supporting the university, by serving as a catalyst and mentor for the identification and delivery of sustainable improvement initiatives. We also want to enable a culture of continuous improvement. The resources that we are now hiring to work on ROSE will be part of the OCI.

Read about all of the ROSE initiatives on the resource optimization website at: > wwwumanitoba.ca/admin/rose

Record-setting dentistry gift

Professor receives prestigious Fulbright Award

A record-setting support of an alumnus will enable the launch of a unique dental implant program targeting underserved populations.

Gerald Niznick [DMD/66] has donated $500,000 to the Faculty of Dentistry to develop and launch a novel denture program that will demonstrate how modern, standardized and affordable dental implant procedures can be part of conventional dental therapy available to all. It is the largest gift ever received by the faculty at the U of M.

"At the same time, an important standard will be the first of its kind nationally or internationally and will provide an international leadership position for the Faculty of Dentistry in the area of implant dentistry," Iacopino said. "Our graduating students will be among the best prepared graduates for patient care in this increasingly important area of dental practice."

Andrew Woolford, associate professor with the U of M department of sociology, has been granted a Fulbright Scholar Award to the University of New Mexico. Woolford will spend four months, starting in January 2012, researching for a project entitled: "A Tonic for the Boarding School Blues: Genocide and Historical Redress in Canada and the U.S."

As a Fulbright Scholar with the University of New Mexico's Department of Sociology, Woolford's project will compare American Indian boarding schools and Canadian residential schools, and he hopes to address questions of genocide and learn about the movement for boarding school reparations.

"It is with a great deal of pleasure that I welcome Dr. Andrew Woolford to the distinguished group of Canadian-U.S. Fulbright Scholars," says Michael Hawes, executive director of Fulbright Canada. "Dr. Woolford is extremely deserving of this award, and I have no doubt his research will produce unique and critical insights into the impact of indigenous peoples' experience with boarding school practices in North America, which will have tremendous impact on both sides of the border."

Woolford holds a PhD in sociology from the University of British Columbia. He earned his masters in sociology from the University of Western Ontario, and a BA in sociology from the University of Victoria. He has been with the University of Manitoba since 2002, and has held a number of teaching positions within the department of sociology, where he has received several teaching and research prizes for his work. Woolford has been widely published in peer reviewed and academic journals, and he is the author of several books on restorative justice and conflict resolution.

Operating in over 150 countries worldwide, the Fulbright program has long been regarded as the world's premiere academic exchange. Fulbright Canada is the gold standard for academic exchanges and intellectual opportunity.

Bipole III panel draws lively debate on ‘where to draw the line’

The Centre for Professional and Applied Ethics is reworking things up again on campus with its series of panel discussions. To commence this year’s series, three panelists discussed the social and ethical considerations of Bipole III, the proposed new high voltage direct current (HVDC) transmission project by Manitoba Hydro set to begin in late 2012.

The transmission line, which had originally been set to run on the east side of Lake Winnipeg, will now begin in northern Manitoba, run west of Winnipeg and Lake Manitoba and end at a new converter station east of Winnipeg. The purpose of the line is to service the southern part of the province and export markets in the United States.

Panelists Jim Graham, U of M professor emeritus and an executive member of the Bipole III Coalition group, presented the group’s case for maintaining the original east-side plan.

The original plan was overruled by the provincial government due to environmental concerns raised by Aboriginal people living in the area. John Ryan, the second panelist, a retired professor of geography and senior scholar at the University of Winnipeg, brought to the table another plan for consideration, namely the possibility of burying the transmission line beneath Lake Winnipeg, a possibility that Ryan argued would both be more cost-effective and less damaging to the environment than either the abandoned east plan or the new west plan.

Lynne Fernandez, the third panelist and a political economist with the Canadian Centre for Policy Alternatives (CCPA), spoke on behalf of the considerations for keeping the new west-side plan.

Graham, also a technical engineer, began his presentation with the engineer’s code of ethics, pointing out that, according to the code, the “well-being of the public” is always part of the engineer’s consideration. In 2006, he said, this broader conscience was further augmented by “an engineering obligation” to climate change and maintaining the environment. His Bipole III Coalition group is fighting to retain the original plan to run the line along the east side of Lake Winnipeg, citing reasons such as lower cost (though this claim has been disputed) of the east side line, as well as greater interference with farmlands and aerial crop spraying. The group also argues that the “pristine” Boreal environment which the new plan is said to protect is less pristine than claimed.

Fernandez argued that the sustainable development framework under consideration by Manitoba Hydro new plans, in moving the bipole line from the east to the west side, allowed for other, longer-term considerations than only economic ones, namely those of economic, social and environmental factors. The Boreal Forest environment in question, and being proposed to UNESCO for designation as a World Heritage Site, she said, had a “deep level of intactness.” Free from significant anthropogenic fragmentation, explained Fernandez, this forest is the “most intact boreal forest in the world,” and therefore important as a “haven for species being pushed north.” The region has also been recognized by the global scientific community as the largest primary intact forest left in the northern hemisphere, second to the Amazon rainforest, and as a global storehouse of carbon, which is critical to mitigating climate change.

Bipole III has become an election issue. In 2007, the NDP government, which overruled the original plan, cited as the major factor the protection of a proposed UNESCO World Heritage site in that area.
WE’RE HERE TO SERVE OTHERS’

Dean Brian Postl reflects on medicine’s community role

BY MARIANNE MAYS WEBBE

The Bulletin

On meeting Dr. Brian Postl, dean of the Faculty of Medicine, I immediately confess to him that I’m a bit under the weather, and then defend my impulse to over-share by adding, “Everyone gives you their list of health concerns on meeting you, right?” He smiles. “It’s not uncommon,” he answers kindly.

As doctor and dean, Postl is the kind of man who seems to be in absolutely the right place and vocation: his presence communicates trustworthiness, thoughtfulness and diligence, a serious commitment to his role.

He was installed as dean in July of last year, and says he’s happy for the opportunity to apply his administrative skills here at the university. Though he maintains his own practice, that’s a job he’s left to a great friend and former CEO of the Winnipeg Regional Health Authority (WRHA), Dr. Alvin Roos, who has a great deal of experience in medicine. “I’m positioned to provide advice on the most pressing health issues relevant to our society.”

Postl’s leadership has been evident in his role as dean, especially in his work to help others. “Recognition of their leadership in the health and welfare of children, particularly in Northern populations, is much deserved and international.” “Recognition of their leadership in the health and welfare of children, particularly in Northern populations, is much deserved and international.”

He acknowledges that his position is one that involves a little less time in the public eye, and a bit more focus on education, research and training, he says.

Coming back to the university has also offered, as he puts it, a very enjoyable set of exposures. “I appreciate the intellectual stimulation of the environment, and greatly enjoy working with students.”

The position of dean at the U of M has felt a bit like a homecoming for him. “His history at the university goes back to 1976 when he graduated from medicine; in 1981 and 1982, respectively, he received his Royal College Fellowship in community medicine and pediatrics. Much of his own research and work has focused on populations health, and Aboriginal and Northern populations in particular.”

Postl was attracted to medicine and these specialities because of how they combined his interests and instincts.

On methodical, scientific side of things, he appreciated how “the micro and the macro come together through the science, in epigenetic and molecular biology.” Overall, he says, “The specialties [of community health and pediatrics] combined two interests of mine: on the one hand, merging biological sciences and examining the social aspect of community medicine—investigating the determinants of health through the population health perspective; and on the other, to act as a community resource and to use one’s skills to the benefit of others.”

His position to help others has been a strong determinant in Postl’s life choices. When I ask him what he claims as his guiding principle, he responds instantly “That we’re here to serve others,” he says.

This same clarity and dedication are attributed Postl values in those around him, especially colleagues— he has the highest regard for “how they serve others; their commitment to being physicians.”

His vision for the Faculty of Medicine is informed by the centrality of service. As he says, “The people of Manitoba pay to have their health needs met as a community, and so our obligation is to assure that there are enough of them [doctors], that they are well-trained, and that they are trained in the areas where they are most needed.”

Another major task for the faculty, he suggests, entails a continuous re-imagining of how to keep young physicians in the province. Manitoba is on the upswing, says Postl, and more people want to stay in the province.

“Part of the training is to instil a sense of service in young doctors,” he adds. “To educate them to understand that their respect and status within the community comes both from being a good doctor, but also because of their service—what they do for their community.”

“One has to learn to be open, to be interested, to be continually learning. It’s not a static profession.”

We congrats these researchers on this prestigious honour,” said Dr. Brian Postl, dean of the Faculty of Medicine at the University of Manitoba, and a distinguished senior pediatrician and academic physician who has contributed significantly to the health and welfare of children particularly in Northern communities through his active efforts in developing patient-based programs with a community health perspective. As a life-long caregiver and manager, he has been a creative leader at the senior administrative level in launching organizations and developing policies that address the needs of the most disadvantaged groups in society, particularly the First Nations people in rural Canada. His vision and leadership strengths are now evident nationally as board chair of the Canadian Institute of Health Information (CIHI) and board chair of the Canadian Health Services Research Foundation.

MEET THE DEAN

Health scientists lead the way

Three U of M faculty inducted into Canadian Academy of Health Science

BY JANINE HARASYMCHUK

For The Bulletin

Three Faculty of Medicine professors have been inducted as fellows of the Canadian Academy of Health Sciences (CAHS). Drs. Stephen Moses, Brian Postl and Noralou Roos were inducted into the Academy during a ceremony held in Ottawa. Fellows of the Academy are elected on the basis of their demonstrated leadership, creativity, distinctive competencies and commitment to advancing health and welfare. “This is a very important event for the Faculty of Medicine,” says chair of the CIHI, and board chair of the Canadian Health Services Research Foundation.

Stephan Moses (medical microbiology), is a physician and scientist who has made major contributions internationally to understanding biological and behavioural risk factors for sexually transmitted infections (STIs), particularly HIV infection, and translating this knowledge into practice. Over the past 25 years, he has been at the forefront of investigating and integrating programs three major innovations for HIV prevention, and control of other “conventional” STIs: implementation of targeted, peer-led educational interventions for high-risk populations; and male circumcision for reducing HIV susceptibility among men. These initiatives have had far-ranging impact in improving the health and well-being of vulnerable populations globally.

Noralou Roos (community health sciences), founded the Manitoba Centre for Health Policy and created a population database for understanding why some people are healthy and others are not. She received funding from the Canada Foundation for Innovation to create Canada’s first data laboratory and was awarded a Tier 1 Canada Research Chair in Population Health. Citing Roos’ work, she was among the top 100 Canadian scientists (all fields, all institutions) according to The Institute of Scientific Information. She was a member of the Prime Minister’s National Forum on Health, the Medical Research Council, the Council setting up the Canadian Institutes for Health Research and awarded the Order of Canada.
Patrick Ryan was welcomed on September 21 by the University of Manitoba's Centre for Creative Writing and Oral Culture (CCWOC). The event included a performance by Ryan and a reading by U of M creative writing graduand Toby Cygman. Dr. Patrick Ryan has been announced as CCWOC's fall 2011 storyteller/writer-in-residence. Ryan will be in residence from September 19 to December 7, 2011, and will be available, by appointment, to mentor storytellers and creative writers who wish to improve their craft. Over the course of the semester he will also visit classes, give performances and readings, and facilitate a storytelling circle.

In addition, Ryan will work on his own projects, including finishing articles on a collection of stories he's been gathering from a 90-year-old storyteller in Belfast and developing a manuscript for an anthology.

Ryan has worked as a teacher and professional storyteller for over 30 years. He regularly tours Britain, Europe and the U.S., performing, lecturing and conducting workshops. He has written for the BBC and has participated in several major storytelling projects, such as:

- Living Stories of the World, a multicultural workshop for primary children in inner- and outer-London;
- Kick into Reading and Sports Stories, programs that unite footballers and coaches with schoolchildren through reading;
- Listen Up!, an innovative, long-term storytelling residency in Northern Ireland schools that utilizes storytelling as a means of teaching and learning; and
- Writing Together, a project looking at the impact of writer and storyteller residencies upon teaching and learning.

Now based in London, Ryan grew up in Illinois where he attended the Universities of Illinois and Chicago. He taught primary school in the United States and Great Britain for 10 years and in 2004 completed his doctoral degree at the University of Glamorgan where he is now a research fellow at the George Ewart Evans Centre for Storytelling.

"Patrick Ryan is an extraordinary artist and scholar whose work reminds us that all human beings are storytellers," said Warren Cariou, director of CCWOC and Canada Research Chair in Narrative, Community and Indigenous Cultures. "He shows us how traditional and newly-created stories can come alive in the present moment through the media as well as through the storyteller’s craft. He brings a unique combination of storytelling experience, community activism and scholarly expertise to the university and to our broader community this term. We are so fortunate to have the opportunity to learn from him."

For help with your creative writing or storytelling, contact Patrick at ccwocwir@cc.umanitoba.ca or at 480-1067 to arrange a free one-on-one meeting with him. Or join him for one of his free Wednesday storytelling circles.

"The Emotional, Interpersonal and Health Costs of Perfectionism"

EVERYONE WELCOME!
Apocalypse or Utopia: Cocktail party of the year kicks off Homecoming 2011

BY MARIJANNE MARIS WAEBE

The Bulletin

When David Barber was asked to participate in a series of panel discussions that would engage with the larger community on topical, relevant issues, he says he envisaged “a small cocktail party and a low-key discussion about climate change over a single malt scotch.” Instead, the launch of the Visionary Conversations series was a full-house event that doubled as the kick-off to 2011 Homecoming and was held in the Schultz Theatre, St. John’s College, on the evening of Wednesday, September 14.

Six panelists were hosted by President and Vice-Chancellor David Barnard to discuss the topic “The Future: Apocalypse or Utopia” from the perspective of their own expertise.

Leading off the conversation was Brenda Elias, Medicine, whose research focuses on population health with an emphasis on economically and socially disadvantaged populations. Elias argued that evidence-based research can be a route to building a “better future” of social equality rather than reverting to stereotypes.

The better future, suggested David Barber, Canada Research Chair (CRC) in Arctic System Science, is one that takes into account the signifcant amount of environmental change that has taken place over a relatively short period of time. “We can’t exist with our heads in the sand,” he said. The question of “utopia or apocalypse” is one best applied to the economic benefits of alternative energies in relation to “whether we want to pass the costs on to future generations,” he added.

Karen Busby, law, broached the quality of the Canadian future with regard to human rights, religious freedom and inter-religious tolerance and respect. Busby pointed out a gap between the general self-perception or even self-definition by Canadians and reality. Though Canadians continue to define Canada as broad-minded and accepting, with an overall acceptance of difference, research based on recent news stories point, on the contrary, to greater government interference in questions of religious freedom and an increase in certain kinds of intolerance of religious minorities on the part of Canadians, perhaps in part because of security fears.

Rick Holley, Food Science professor, shook up the discussion a little by discussing food safety, suggesting that “we have no way of measuring effectiveness of our agencies and interventions” because “we are preoccupied with whether we are doing things right, rather than the whether we are doing the right things.” There are too many questions, he said, about food-borne illnessness and cross-contamination between animal and plant industries. “We need to become preventative rather than reactive,” he said.

Diana Brydon, CRC in Globalization and Cultural Studies, spoke of “the danger of a single story” in an increasingly global culture. Brydon echoed some of Busby’s concerns about respect by suggesting that more collaboration and dialogue—more honest, open, respectful dialogue, even in cases of deep disagreement—was needed in order for us to “learn how to come to at least respect others’ decisions and how they come to those decisions.”

The final panelist, Michael Freund, CRC in Conducting Polymers and Electronic Materials, stretched the idea of a more collaborative future from another angle. Demonstrating the technology and materials fields moving into mutual, cross-disciplinary efforts, Freund used the example of silicon based electronic memory in computing being replaced with polymer-based technologies in order to expand electronic memory capacities. Remarkably, all of this thought-provoking discussion—plus a question-and-answer period with the audience and a clever summary round-up by Biparj Jaya, VP research and international)—took place in a time span of a buzzy hour and a half. Audience members commented that they appreciated an opportunity to be part of a conversation that sits at the heart of what a university is, and what it does. And a heady cocktail it was!

The conversation continues

On October 18, the next instalment of Visionary Conversations is hosted by President Barnard on the subject, “Usable Cities.” Panelists are Ralph Stern, dean of Architecture, Michelle Richard, the newly installed director of campus development and planning, and Richard Milgrom, head of the department of city planning in the Faculty of

FROM THE ARCHIVES

WINNIPEG COLLECTOR

AND MOVIE ENTHUSIAST Ely Bronstein has donated a large donation of Hollywood related material to the University of Manitoba Archives & Special Collections.

Bronstein’s collection is largely based around the 1937 Frank Capra film, Lost Horizon, staring Ronald Colman, the collection also contains other classic film era movies such as the 1956 film, Helen of Troy. There are over 2,300 items, including 400 articles, Bronstein’s personal correspondences with some of the cast and crew and like-minded Lost Horizon fans and copies of documents of the film, including scripts, copyright information and affidavits from some of the cast and crew confirming that the actress in a particular scene was fully clothed, despite the scene’s appearance. The collection also contains nearly 900 photos and stills from the film. Bronstein was captivated by the film, which spoke to him on a spiritual level, the Tibetan setting reminding him of where he was born. Graduating

of the University of Manitoba with an Arts degree in Anthropology in 1970, Bronstein never lost his passion for the film, or for Hollywood in general, and began his collection in 1982. In 2010, Bronstein felt it would best serve researchers of film if he donated it to the Archives.

COFFEE WITH A CO-WORKER

Coffee or tea? I'm a bit of a coffee wuss. I drink instant coffee or decaf with an occasional frozen coffee treat or flavoured coffee on weekends.

The Bulletin plays 10 or 20 questions with Juliette Nadeau.

Co-worker: Please describe your workspace.
Nadeau: I love “z” words like cadenza, fuzzy, Mozart, peppered with interviews, photographs and newspaper clippings, Barbour lives in a small city of the world that includes the evolution of local courtship and dating practices, from the commoditization of the courting experience by the CP Railway through their “Moonlight Specials,” to the development of an elaborate amusement area that encouraged public dating, and to its eventual demise of local courtship and dating practices. According to the publisher, the book includes “the evolution of local courtship and dating practices, from the commoditization of the courting experience by the CP Railway through their ‘Moonlight Specials,’ to the development of an elaborate amusement area that encouraged public dating, and to its eventual demise of local courtship and dating practices.”

Co-worker: What is your morning routine like?
Nadeau: I'm a morning person. I love waking up early and making the most of the morning. I often start my day with a cup of coffee and a reading session, catching up on the latest news and the morning papers. During the summer months, I enjoy sitting on my front porch in the morning sun, sipping coffee and enjoying the fresh air.

Co-worker: What is your office like?
Nadeau: My office is a cozy space that I've decorated with a mix of personal and professional items. I have a desk where I do most of my work, a comfortable chair, and a window that provides plenty of natural light. I also have a small garden area outside my office, which I enjoy spending time in during the warmer months.

Co-worker: What is your favorite way to relax?
Nadeau: I love spending time in nature. Whether it's going for a walk in the woods, hiking, or simply sitting by the lake, I find it grounds me and helps me refocus. I also enjoy spending time with my family and friends, whether it's a evening out or just a cozy at-home evening.

Co-worker: What is your favorite book to read?
Nadeau: A challenging question! I love a variety of genres, but I have a particular fondness for historical fiction and mysteries. Some of my favorite books include “The Bulfinch’s History of the World” by Thomas Bulfinch, “The Great Gatsby” by F. Scott Fitzgerald, and “The Girl with the Dragon Tattoo” by Stieg Larsson.

Co-worker: What is your favorite music genre?
Nadeau: I enjoy a wide range of music, but I have a particular love for jazz and classical music. I often find myself listening to jazz on a lazy afternoon or while working on a particularly challenging project.

Co-worker: What is your favorite hobby?
Nadeau: I enjoy gardening and cooking. I love experimenting with new recipes and growing my own vegetables. I find it rewarding to see the fruits of my labor and to share my creations with others.

Co-worker: What is your favorite cuisine?
Nadeau: I love Mediterranean cuisine. The flavors and ingredients are fresh and simple, and I enjoy the way they come together to create delicious dishes. I often find myself cooking with a variety of Mediterranean ingredients, such as olive oil, garlic, and tomatoes.

Co-worker: What is your favorite way to unwind?
Nadeau: I love spending time outdoors, whether it's going for a hike or simply sitting by the lake. I also enjoy spending time with my family and friends, whether it's a evening out or just a cozy at-home evening. I find it grounding and refreshing to be surrounded by nature and the people I love.

Co-worker: What is your favorite thing about working at the University of Manitoba?
Nadeau: I love the sense of community and the opportunity to be a part of a dynamic and diverse institution. I enjoy working with a wide range of people and being able to contribute to the academic and cultural life of the University.

Co-worker: What is your favorite thing about working with students?
Nadeau: I love the energy and enthusiasm of students. They are full of ideas and are always looking for new ways to learn and grow. I enjoy seeing them succeed and watching them develop into confident, capable individuals.

Co-worker: What is your favorite thing about working with faculty?
Nadeau: I love the expertise and knowledge of faculty. They are passionate about their work and are always willing to share their insights and experiences. I enjoy working with them to bring new ideas and perspectives to the University.

Co-worker: What is your favorite thing about working with staff?
Nadeau: I love the support and camaraderie of staff. They are a dedicated group of individuals who work tirelessly to ensure that the University operates smoothly. I enjoy working with them to create a positive and productive environment.

Co-worker: What is your favorite thing about working at the University of Manitoba?
Nadeau: I love the sense of community and the opportunity to be a part of a dynamic and diverse institution. I enjoy working with a wide range of people and being able to contribute to the academic and cultural life of the University. I also love the sense of accomplishment that comes with seeing my work make a difference in the lives of students and faculty.

RESEARCH FELLOWSHIPS

The Centre for Professional and Applied Ethics invites applications for Research Fellowships for the 2012-2013 academic year from University of Manitoba faculty members holding tenured or probationary appointments. The Centre is housed within the Department of Philosophy and has a mandate to promote interdisciplinary research on applied ethics in all areas of practical and professional life. Funding for these Research Fellowships is provided by: the Mary Catherine Cartwright Endowment of the Department of Philosophy and the Imperial Oil Ethics Endowment Fund.

Successful applicants will be appointed as Research Associates of the Centre and will be granted release time stipends for 3 hours of teaching or the equivalent. Alternatively, the applicant may choose to apply for financial support of up to $5,000. In that case, a draft budget will be required, detailing how the grant money would be spent. Recipients will be granted release time stipends for 3 hours of teaching or the equivalent. Alternatively, the applicant may choose to apply for financial support of up to $5,000. In that case, a draft budget will be required, detailing how the grant money would be spent. Recipients will be

Two Research Fellowships are available. One is open to all University of Manitoba faculty members and the Centre wishes to encourage applications from researchers in all areas of inquiry. The other is open only to members of the Faculty of Arts.

The Executive Committee of the Centre will act as the selection committee. Prospective applicants are encouraged to visit the Centre's Web Site for further information, including the correct application procedure: http://www.umanitoba.ca/faculties/arts/departments/philosophy/ethics/2314.htm

You may also wish to contact the Director for additional assistance.

Applications, and all supporting material, must be submitted not later than December 15th, 2011, to:
Professor Arthur Schaefer, Director, Centre for Professional and Applied Ethics
University College, University of Manitoba, 220 Dysart Road, Winnipeg, MB R3T 2M8
Phone: (204)474-9107; Fax: (204)261-0021
Email: schaefer@cc.umanitoba.ca

CALL FOR NOMINATIONS

Annual Outreach Award

Each year the University of Manitoba honours support and academic staff who have been notably active in outreach activities.

Deans and Directors are accepting nominations until Friday, October 28 of anyone active during 2010-2011 in enlarging and enriching the contacts of the university. Administrative units of the University should send their nominations to their respective Vice-President.

Outreach activities may include increasing access to existing university programs, extending the nature and range of the university's programs and services, and sharing most effectively with the community the resources of the university.

While there are no restrictions on nominating a previous recipient, the case for doing so must be based on outreach activities since the previous award.

The Dr. and Mrs. Ralph Campbell Award

(for particularly meritorious service in outreach activities)

To mark the end of the term of Dr. Ralph Campbell as President of the University of Manitoba, his colleagues and friends established a trust fund to support the Dr. and Mrs. Ralph Campbell Outreach Award for meritorious service in outreach activities. The award is referred to as The Campbell Award.

The Campbell Award will be presented at the Annual Outreach Reception in November, 2011 to a staff member of the University of Manitoba. The value of the award will be that determined from time to time by the Board of Governors. In each of the past years, the award has been $1,000. If, in the judgment of the committee of selection there are two candidates of equal merit, the committee may recommend that the Campbell Award be divided between the two candidates.

Nominations for the Campbell Award will be accepted from staff members of the University, alumni and members of the community. No recipient of a Campbell Award is eligible to receive it a second time until the tenth year after the first receipt of the award.

The Presidential Advisory Committee on University Outreach will continue to act as the selection committee for the Campbell Award and to advise the President of the most appropriate recipients for this year.

Outreach activities may include increasing access to existing university programs, extending the nature and range of the university's programs and services, and sharing most effectively with the community the resources of the university.

**Physical Punishment**

*Fuelling an informed debate*

**BY MELNI GHATTORA**

“You often will hear people say things like ‘Well, I was hit when I was kid and I turned out fine, so it’s fine.’ Some people use their own personal experiences to determine if they believe it’s safe or not safe to use physical punishment as a means of child discipline. This creates challenges in terms of changing peoples’ minds about whether or not they should hit their children,” says Tracie Afifi.

“In her line of work the taboo topic of conversation isn’t religion or politics, instead Afifi finds child maltreatment and child physical punishment a challenging area of dialogue. It’s definitely controversial and I think the more we can communicate that child physical punishment is associated with poor mental health outcomes, that’s something that could help to change peoples’ minds on if they should be using physical force as a means of discipline,” explains Afifi.

The assistant professor in the Department of Community Health Sciences, focuses a large portion of her study on family violence, with a specific interest in child maltreatment and intimate partner violence. “I’m interested in the mental and physical health correlates of these types of family violence and I’m also interested in looking at prevention and intervention strategies,” says Afifi.

To determine how physical punishment is associated with mental and physical health outcomes, “we’re looking at individuals who were only physically punished and didn’t experience child abuse, which is a novel advance in the literature because often when researchers look at physical punishment they don’t also consider whether or not the individuals were abused,” she explains. “Our research creates three groups: individuals who didn’t experience child abuse or physical punishment, individuals who experienced physical punishment only, and then individuals who experienced child abuse, with or without physical punishment.”

“Child maltreatment is an understudied public health problem within Canada and we need to encourage Canadian data collection. Currently, we don’t have anything that is equivalent to what is available in the United States,” says Afifi.

The findings also examine how collecting Canadian data can be done relatively easily with the resources that are already in place. “Because we do collect a lot of great nationally representative information through institutions like Statistics Canada, for example, this could be implemented in surveys that are ongoing by just simply adding a child maltreatment module, as few as five questions,” says Afifi. “We hope that these questions will be included in national Canadian surveys in the near future.”

Currently, we don’t have anything that is equivalent to what is available in the United States, which speak to that problem. “Child maltreatment is an understudied public health problem within Canada and we need to encourage Canadian data collection. Currently, we don’t have anything that is equivalent to what is available in the United States,” says Afifi.

Some Canadian data do exist such as the Canadian Incidence Survey of Reported Abuse and Neglect (CIS). These data are a rich and interesting source, but the records are limited and are not representative of child maltreatment within Canada.

Afifi feels it is important to further this data collection within the province of Manitoba, something she plans to do in the future, but also to encourage a larger scale data collection within Canada.

“I’ve published many studies on child maltreatment and the majority of this work uses data from the United States, but what’s really important for policy development and population-based intervention strategies are to further child maltreatment research within the Canadian context.”
